

React Coding Challenge: User Management Dashboard

Objective:

Build a **User Management Dashboard** using React and integrate with the GoRest Public API. The app should allow an admin to:

- View users (GET)
- Add a new user (POST)
- Edit existing user details (PUT)
- Delete a user (DELETE)

This challenge will help you practice:

- API integration
- Controlled forms
- CRUD operations
- Component structuring
- State management with hooks

API Details:

Base URL: <https://gorest.co.in/public/v2>

Endpoints:

- GET /users → Fetch users (paginated)
- POST /users → Add user
- PUT /users/:id → Update user
- DELETE /users/:id → Delete user

Note: Only GET is publicly accessible without a token. For POST, PUT, and DELETE, use a temporary token from their API Playground. Login and you will get the token. Add it via Authorization header:

js

```
headers: {  
  Authorization: 'Bearer <your-access-token>'  
}
```

Features to Implement:

1. User List Table

- Fetch and display users using GET /users
- Show in a table: Name, Email, Gender, Status
- Add pagination controls (optional)

2. Add User

- Show a form with inputs: Name, Email, Gender (radio/select), Status (Active/Inactive)
- Validate required fields
- On submit, call POST /users

3. Edit User

- On clicking "Edit", prefill the form with user data
- Submit should call PUT /users/:id

4. Delete User

- Add a "Delete" button in the user table row
- Confirm before deletion
- Call DELETE /users/:id and update UI accordingly
